

Restricted height modular scaffold

Erection, safe use and dismantling

Modular scaffolds of under 4m deck height are commonly misused in the workplace. Workers may be uninformed about the manufacturer's advice, of known hazards, and of the safe erection and dismantling sequence and put themselves and others at risk. This course provides PCBU's with an opportunity to coach and upskill their staff & contractors through a structured induction into the erection, safe use and dismantling of restricted height modular scaffold on site. This course is focused on the practical application of safe techniques and is facilitated by a scaffold industry subject matter expert. It may be used as a VoC tool in the workplace.

Your training is conducted in accord with Commonwealth and State/Territory legislation & guidance, Australian/New Zealand standards and industry codes of practice.

Competency based training

This course is delivered and assessed on behalf of Heightsafe Solutions.
